

Product Requirements Document:

GigDash

Hyper-Local Real-Time Job Marketplace

1. Executive Summary

GigDash ek mobile-first marketplace hai jo job providers (Givers) aur seekers ko "Uber-style" matching ke zariye connect karta hai. Iska objective blue-collar aur grey-collar workers ko unke 5km ke radius mein turant kaam dilwana hai.

2. User Personas

- **Job Giver:** Chote dukandaar, contractors, ya ghar ke malik jinhone turant 1-2 din ya kuch ghanton ke liye worker chahiye.
- **Job Seeker:** Daily-wage workers, students, ya freelancers jo apne free time mein extra kamayi karna chahte hain.

3. Core Features

A. For Job Givers (The Hiring Side)

- **Quick Post:** 3 steps mein job posting (Category -> Location -> Wages).
- **Live Tracking:** Worker ki location monitor karna.
- **Rating System:** Feedback aur performance review dena.

B. For Job Seekers (The Worker Side)

- **Instant Notification:** Radius-based emergency alerts (siren/alert).
- **In-App Wallet:** Payment tracking aur digital earnings display.
- **Navigation:** Job location tak Google Maps integration.

4. Technical Specifications

Component	Tech Stack
Mobile App	Flutter / React Native
Backend	Node.js / Express.js
Real-time Engine	Socket.io
Database	MongoDB
Authentication	Firebase / Aadhaar API

5. Roadmap

- **Phase 1 (MVP):** Basic login, manual matching, aur calling feature.
- **Phase 2 (Scale):** Aadhaar verification, number masking, aur payments.
- **Phase 3 (Optimization):** AI-based pricing aur advanced background checks.
